

Biopsy of Oral Tissue

Purpose: Surgical removal of a small tissue sample from the mouth for diagnosis.

First 24 Hours:

- Bite on gauze for 30–45 minutes to control bleeding.
- Avoid disturbing the site with your tongue or fingers.
- Do not rinse, spit, or use a straw for the first 24 hours.

Pain & Swelling:

- Mild soreness is normal; take OTC or prescribed pain relievers as directed.
- Apply ice packs to the face for 20 minutes on/off for the first few hours if needed.

Bleeding:

- A small amount of oozing is normal for 1–2 days.
- Apply firm pressure with gauze if bleeding increases.

Oral Hygiene:

- Avoid brushing directly over the biopsy site for several days.
- Brush and floss other areas normally.

Diet:

- Soft foods for the first 1–2 days.
- Avoid hot, spicy, or acidic foods that may irritate the site.

Follow-Up:

- Stitches may dissolve on their own or require removal.
- Contact the office if you experience persistent bleeding, increasing pain, or swelling after day 3.
