

Hemisection

Purpose: Surgical removal of one root and the overlying portion of a multi-rooted tooth, often to preserve the remaining healthy tooth structure.

First 24–48 Hours:

- Mild bleeding, swelling, and discomfort are normal.
- Apply ice packs to the outside of the face for 15–20 minutes at a time during the first day.
- Keep head elevated while resting.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics exactly as directed.
- Tooth sensitivity and gum tenderness may last for several days.

Oral Hygiene:

- Brush teeth gently, avoiding the surgical site for the first few days.
- Begin gentle warm salt water rinses 24 hours after surgery.

Diet:

- Soft foods for at least 48 hours.
- Avoid chewing on the treated side until cleared by your dentist.

Special Precautions:

- Avoid smoking and alcohol during healing.
- Do not disturb the surgical site with your tongue or fingers.

Follow-Up:

- Attend scheduled follow-up visits to assess healing and tooth stability.
- Contact your dentist if bleeding persists, swelling worsens after 3 days, or signs of infection occur.
