

Hemisection or Root Resection of Multi-Rooted Teeth

Purpose: Surgical removal of one root (root resection) or one half of a multi-rooted tooth (hemisection) to preserve the remaining structure.

First 24 Hours:

- Mild bleeding and swelling are normal.
- Apply ice packs externally in 15-minute intervals to reduce swelling.
- Avoid spitting, rinsing, or using straws for the first 24 hours.

Pain & Sensitivity:

- Use prescribed or OTC pain relievers as directed.
- Sensitivity in the treated tooth and gums is common.

Oral Hygiene:

- Brush gently around the surgical site with a soft-bristled toothbrush.
- Begin warm salt water rinses after 24 hours, several times daily.

Diet:

- Eat soft foods for the first few days.
- Avoid chewing on the treated side.

Special Precautions:

- Avoid smoking and alcohol, as they can delay healing.
- Follow all restorative instructions if a crown or filling will be placed later.

Follow-Up:

- Sutures may dissolve or require removal.
- Contact the office if swelling worsens after 3 days, bleeding is excessive, or signs of infection occur.
