

Socket Preservation (Ridge Preservation)

Purpose: Procedure performed after tooth extraction to preserve the bone and gum tissue for future implant placement.

First 24–48 Hours:

- Mild bleeding and swelling are normal.
- Apply ice packs to the outside of the cheek for 15–20 minutes at a time during the first day.
- Keep your head elevated when resting.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics exactly as directed.
- Mild tenderness at the surgical site is normal.

Oral Hygiene:

- Avoid brushing directly over the site for the first few days.
- Rinse gently with warm salt water starting 24 hours after surgery.

Diet:

- Soft foods for the first 48 hours.
- Avoid chewing on the treated side and avoid spicy, acidic, or hard foods.

Special Precautions:

- Do not disturb the site or remove any protective dressing.
- Avoid smoking and alcohol during healing.

Follow-Up:

- Attend follow-up appointments to check healing and bone preservation.
- Contact your dentist if bleeding persists, swelling worsens after 3 days, or signs of infection occur.
