

Alveoloplasty (Bone Smoothing)

Purpose: Surgical reshaping or smoothing of jawbone, often before dentures or after extractions.

First 24 Hours:

- Bite on gauze to control bleeding for 30–45 minutes.
- Avoid rinsing, spitting, or using a straw to protect the blood clot.
- Keep head elevated when resting.

Pain & Swelling:

- Take prescribed or OTC pain relievers as directed.
- Apply ice packs to the cheek 20 minutes on/off for the first 6–8 hours.
- Switch to warm compresses after 48 hours if swelling persists.

Bleeding:

- Slight bleeding is normal for the first 24 hours.
- Apply firm pressure with fresh gauze if bleeding continues.

Oral Hygiene:

- Avoid brushing the surgical site for 1 week.
- Begin gentle warm saltwater rinses after 24 hours.
- Brush remaining teeth normally.

Diet:

- Soft, cool foods for the first 2–3 days.
- Avoid crunchy or spicy foods until fully comfortable.

Follow-Up:

- Suture removal if placed.
- Contact the office if you experience sharp bone edges, worsening pain, or prolonged bleeding.
