

Dental Crown Placement

Purpose: Covering and protecting a damaged or weakened tooth with a custom-made cap.

First 24 Hours:

- Avoid chewing on the crowned tooth until numbness wears off.
- Temporary crowns require extra care; avoid sticky or hard foods until permanent crown is placed.

Pain & Sensitivity:

- Mild soreness or temperature sensitivity is normal.
- Use OTC pain relievers as needed.

Oral Hygiene:

- Brush and floss normally, but slide floss out rather than pulling up to avoid dislodging a temporary crown.

Diet:

- Avoid very hard, sticky, or chewy foods if you have a temporary crown.
- After permanent crown placement, resume normal diet as comfort allows.

Special Precautions:

- If your bite feels uneven after numbness wears off, contact the office for adjustment.
- If a temporary crown comes off, replace it with temporary dental cement and call the office.

Follow-Up:

- Permanent crowns should feel comfortable and natural.
- Contact the office if pain worsens, swelling occurs, or the crown feels loose.
