

Dental Implant Placement

Purpose: Surgical placement of a titanium post into the jawbone to replace a missing tooth.

First 24 Hours:

- Bite on gauze for 30–45 minutes to control bleeding.
- Avoid spitting, rinsing, or using a straw to protect the blood clot.
- Keep head elevated while resting.

Pain & Swelling:

- Use prescribed or OTC pain medication as directed.
- Apply ice packs to the cheek for 20 minutes on/off for the first 6–8 hours.
- Swelling and minor bruising may occur and peak at 48–72 hours.

Bleeding:

- Slight bleeding or pink saliva is normal for 24–48 hours.
- Apply firm pressure with gauze if bleeding increases.

Oral Hygiene:

- Avoid brushing the surgical site for several days.
- Use prescribed antimicrobial mouth rinse if provided.
- Brush and floss other areas normally.

Diet:

- Soft foods for several days.
- Avoid chewing on the implant site.

Activity:

- Avoid strenuous activity for 48 hours.

Follow-Up:

- Stitches may dissolve or require removal after 1 week.
- Report persistent pain, swelling, or loosening of the implant immediately.
