

Frenectomy

Purpose: Removal or reshaping of a frenum (small fold of tissue) to improve function or fit of dentures.

First 24 Hours:

- Keep gauze in place for 30–45 minutes to control bleeding.
- Avoid excessive talking or movement of the lips to prevent tension on the site.

Pain & Swelling:

- Use prescribed or OTC pain relievers as needed.
- Apply ice packs to the face in 20-minute intervals for the first few hours.

Bleeding:

- Slight bleeding or pink saliva may occur for 1–2 days.
- Apply gentle pressure with gauze if needed.

Oral Hygiene:

- Avoid brushing directly over the surgical site for 1 week.
- Begin gentle warm saltwater rinses after 24 hours.

Diet:

- Soft, cool foods for the first 2–3 days.
- Avoid acidic foods that may sting.

Follow-Up:

- Suture removal if required.
- Call if swelling worsens, pain increases, or bleeding persists.
