

Immediate Dentures

Purpose: Dentures placed immediately after tooth extraction to restore appearance and function.

First 24 Hours:

- Keep dentures in place for the first 24 hours unless instructed otherwise; this helps control swelling and bleeding.
- Minor soreness, swelling, and difficulty speaking or chewing are normal.

Pain & Sensitivity:

- Use prescribed or OTC pain relievers as directed.
- Apply cold compresses externally to reduce swelling.

Oral Hygiene:

- Rinse gently with warm salt water starting 24 hours after surgery.
- Clean dentures daily with a denture brush and cleanser.
- Clean gums and tongue gently with a soft brush or gauze.

Diet:

- Start with soft, cool foods.
- Avoid very hot, spicy, or hard foods during initial healing.

Special Precautions:

- Do not attempt to adjust dentures yourself; this may cause damage.
- Expect changes in fit as swelling decreases; relining may be required.

Follow-Up:

- Adjustment appointments are necessary to ensure comfort.
- Contact the office if bleeding persists, pain worsens, or dentures feel too loose.
