

Oral Lesion Removal

Purpose: Surgical excision of benign or suspicious growths, ulcers, or lesions from the oral cavity.

First 24–48 Hours:

- Mild bleeding and swelling are normal.
- Apply gauze with gentle pressure if bleeding occurs.
- Keep the head elevated to minimize swelling.

Pain & Sensitivity:

- Take OTC or prescribed pain relievers as directed.
- Some tenderness in the area is common for several days.

Oral Hygiene:

- Brush teeth carefully, avoiding direct contact with the surgical site.
- Begin gentle warm salt water rinses 24 hours after the procedure.

Diet:

- Eat soft, cool foods for the first 1–2 days.
- Avoid spicy, acidic, and crunchy foods until the area heals.

Special Precautions:

- Avoid smoking and alcohol, as they delay healing.
- Do not disturb the site with your tongue or fingers.

Follow-Up:

- Return for follow-up as scheduled to check healing and review pathology results if applicable.
- Contact the office if bleeding persists, swelling worsens after 3 days, or signs of infection develop.
