

Pulpotomy (Primary or Permanent Teeth)

Purpose: Removal of the diseased portion of the dental pulp (nerve tissue) within the crown of the tooth, preserving the remaining healthy pulp tissue.

First 24 Hours:

- Mild discomfort is normal after anesthesia wears off.
- Avoid chewing on the treated tooth until numbness subsides.
- Some sensitivity to temperature may occur.

Pain & Sensitivity:

- OTC pain relievers may be used as directed.
- Avoid extreme hot or cold foods for a few days.

Oral Hygiene:

- Brush and floss normally, being gentle around the treated tooth.
- Maintain good oral hygiene to prevent further decay.

Diet:

- Soft diet for the first day; gradually return to normal eating.
- Avoid sticky, hard, or chewy foods that could dislodge temporary fillings.

Special Precautions:

- A crown or final restoration may be required; avoid biting hard foods until it is placed.
- Monitor for signs of swelling, pain, or sensitivity that worsens.

Follow-Up:

- Attend follow-up visits for permanent restoration placement if needed.
- Contact the office if there is persistent pain, swelling, or signs of infection.
