

Post-Care Instructions After Final Crown Placement

- Numbness: Wait until numbness wears off before chewing to avoid biting your cheek or tongue.
- Chewing: Avoid very hard or sticky foods for the first 24 hours to allow the cement to fully set.
- Sensitivity: Some mild sensitivity to hot or cold is normal at first but should lessen over time.
- Oral Care: Brush and floss as usual around your new crown to keep the gum tissue healthy.
- Bite Adjustment: If your bite feels uneven or uncomfortable after the crown placement, call our office for an adjustment.

Your new crown is designed to look and function like a natural tooth. With proper care, it should last for many years.
