

Bone Grafting for Implant Site Development

Purpose: Placement of bone graft material to increase bone volume and quality in preparation for future dental implant placement.

First 24 Hours:

- Mild bleeding and swelling are normal.
- Avoid spitting, rinsing, or using straws for 24 hours to protect the graft.
- Apply an ice pack externally in 15-minute intervals to reduce swelling.

Pain & Sensitivity:

- Take prescribed or OTC pain relievers as directed.
- Some soreness in the jaw and chewing muscles is normal.

Oral Hygiene:

- Brush teeth carefully, avoiding the graft site for the first few days.
- Rinse gently with warm salt water starting 24 hours after surgery.

Diet:

- Eat soft, cool foods for the first 48–72 hours.
- Avoid chewing directly on the graft site.

Special Precautions:

- Do not disturb the graft area with your tongue, fingers, or dental tools.
- Avoid smoking and alcohol, as they can delay healing.
- Follow all instructions regarding antibiotics or mouth rinses.

Follow-Up:

- Sutures may dissolve on their own or require removal.
- Contact the office if graft material becomes exposed, excessive bleeding occurs, or signs of infection appear.
