

Bone Grafting for Ridge Preservation (After Extraction)

Purpose: Placement of bone graft material in the socket after tooth extraction to preserve bone height and width for future restorative treatment.

First 24 Hours:

- Mild bleeding and swelling are normal.
- Avoid spitting, rinsing, or using straws for 24 hours to protect the graft.
- Apply an ice pack externally in 15-minute intervals to reduce swelling.

Pain & Sensitivity:

- Use prescribed or OTC pain relievers as directed.
- Some soreness when chewing or speaking is normal.

Oral Hygiene:

- Brush teeth carefully, avoiding the graft site for the first few days.
- Rinse gently with warm salt water starting 24 hours after surgery.

Diet:

- Eat soft, cool foods for the first 48 hours.
- Avoid chewing directly on the graft site.

Special Precautions:

- Do not disturb the graft material with your tongue or fingers.
- Avoid smoking and alcohol, as they can impair healing.

Follow-Up:

- Sutures may dissolve on their own or require removal, depending on the type used.
- Contact the office if you notice graft material dislodging, excessive bleeding, or signs of infection.
