

Inlays and Onlays

Purpose: Custom-made restorations used to repair damaged or decayed teeth when a full crown is not needed.

First 24 Hours:

- Avoid chewing on the treated tooth until numbness wears off.
- Temporary inlays/onlays require extra care; avoid sticky or hard foods until the permanent restoration is placed.

Pain & Sensitivity:

- Mild sensitivity to temperature or pressure is normal for a few days.
- Use OTC pain relievers as needed.

Oral Hygiene:

- Brush and floss normally, being gentle around temporary restorations.
- Avoid abrasive toothpaste that could scratch surfaces.

Diet:

- Avoid very hard or sticky foods that may dislodge a temporary restoration.
- Resume normal diet after the permanent inlay/onlay is placed.

Special Precautions:

- If your bite feels uneven after numbness wears off, contact the office for adjustment.
- If a temporary inlay/onlay comes loose, replace it with temporary dental cement and call the office.

Follow-Up:

- Permanent inlays/onlays should feel comfortable and natural.
- Contact the office if pain worsens, swelling occurs, or the restoration feels loose.
