

TMJ Arthrocentesis / Arthroscopy

Purpose: Minimally invasive procedures used to diagnose or treat temporomandibular joint (TMJ) disorders, relieve pain, and improve jaw function.

First 24–48 Hours:

- Swelling and mild discomfort are common.
- Apply ice packs to the area in 15–20 minute intervals for the first 24 hours.
- Keep your head elevated while resting.

Pain & Sensitivity:

- Take prescribed pain medications or anti-inflammatory drugs as directed.
- Mild jaw stiffness is normal.

Oral Hygiene:

- Brush teeth normally but avoid excessive jaw movement.
- Use antimicrobial rinse if prescribed.

Diet:

- Soft diet for the first few days.
- Avoid chewing gum, hard, or chewy foods.

Special Precautions:

- Limit jaw opening as advised by your provider.
- Perform any prescribed jaw exercises as directed to maintain mobility.
- Avoid strenuous activity for at least 48 hours.

Follow-Up:

- Attend follow-up visits for evaluation and additional treatment if needed.
- Contact the office if you experience severe pain, difficulty opening the mouth, fever, or signs of infection.
