

Dental Bridge Placement

Purpose: Replacement of one or more missing teeth using a fixed bridge anchored to adjacent teeth.

First 24 Hours:

- Avoid chewing on the bridge until numbness wears off.
- Temporary bridges require extra care; avoid sticky or hard foods until permanent bridge is placed.

Pain & Sensitivity:

- Mild soreness or temperature sensitivity is normal.
- Use OTC pain relievers as needed.

Oral Hygiene:

- Brush normally but use a floss threader or special cleaning aid to clean under the bridge.
- Be gentle around temporary bridges.

Diet:

- Avoid very hard, sticky, or chewy foods if you have a temporary bridge.
- After permanent bridge placement, resume normal diet as comfort allows.

Special Precautions:

- If your bite feels uneven after numbness wears off, contact the office for adjustment.
- If a temporary bridge comes off, replace it with temporary dental cement and call the office.

Follow-Up:

- Permanent bridges should feel comfortable and natural.
- Contact the office if pain worsens, swelling occurs, or the bridge feels loose.
