

Gingivectomy / Gingivoplasty

Purpose: Surgical removal (gingivectomy) or reshaping (gingivoplasty) of gum tissue to treat disease or improve aesthetics.

First 24 Hours:

- Mild bleeding and swelling are normal.
- Apply ice packs externally in 15-minute intervals for swelling control.
- Avoid spitting, rinsing, or using straws for the first 24 hours.

Pain & Sensitivity:

- Use prescribed or OTC pain relievers as directed.
- Tooth sensitivity and gum tenderness are normal during healing.

Oral Hygiene:

- Brush gently around the surgical site with a soft-bristled toothbrush.
- Use prescribed antimicrobial rinses as directed.
- Avoid flossing in the treated area until advised.

Diet:

- Eat soft, cool foods for the first few days.
- Avoid hot, spicy, acidic, or crunchy foods.

Special Precautions:

- Do not pull on the lips or cheeks to inspect the site.
- Avoid smoking and alcohol, as they delay healing.

Follow-Up:

- Stitches (if placed) may dissolve or require removal.
- Contact the office if excessive bleeding, severe pain, or signs of infection occur.
