

Guided Tissue Regeneration

Purpose: A periodontal procedure that uses a barrier membrane to direct the growth of new bone and gum tissue where it has been lost.

First 24–48 Hours:

- Mild bleeding, swelling, and discomfort are normal.
- Apply ice packs to the outside of the face for 15–20 minutes at a time during the first day.
- Keep your head elevated when resting.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics as directed.
- Mild sensitivity to hot and cold may persist for several weeks.

Oral Hygiene:

- Do not brush or floss near the surgical site until instructed by your dentist.
- Use prescribed antimicrobial rinses to keep the area clean.

Diet:

- Eat soft foods for the first 3–5 days.
- Avoid chewing on the treated side, and avoid spicy, hard, or crunchy foods.

Special Precautions:

- Avoid smoking and alcohol during healing.
- Do not disturb the surgical site with your tongue or fingers.

Follow-Up:

- Attend follow-up visits to ensure proper healing and membrane stability.
- Contact your dentist if bleeding persists, swelling worsens after 3 days, or signs of infection develop.
