

Tori Removal

Purpose: Surgical removal of excess bony growths (tori) in the mouth, typically to improve comfort, function, or to facilitate denture placement.

First 24–48 Hours:

- Bleeding, swelling, and discomfort are normal.
- Apply ice packs for 15–20 minutes at a time during the first day.
- Keep your head elevated while resting.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics as directed.
- Mild tenderness and difficulty chewing are normal for several days.

Oral Hygiene:

- Avoid brushing near the surgical site for the first week.
- Use prescribed antimicrobial rinses to maintain cleanliness.

Diet:

- Eat soft foods for the first week.
- Avoid hard, crunchy, or spicy foods.

Special Precautions:

- Avoid vigorous rinsing or spitting for 48 hours.
- Do not smoke or drink alcohol during healing.

Follow-Up:

- Attend follow-up visits for suture removal and healing checks.
- Contact your dentist if heavy bleeding occurs, swelling worsens after 3 days, or you notice signs of infection.
