

Apicoectomy

Purpose: Surgical removal of the tip of a tooth root and surrounding infected tissue, often after a root canal.

First 24 Hours:

- Keep the surgical area clean and avoid disturbing it.
- Use gauze to control bleeding as directed.
- Apply ice packs to the face for 20 minutes on/off for the first 6–8 hours.

Pain & Swelling:

- Take prescribed or OTC pain relievers as needed.
- Swelling and minor bruising may occur and peak at 48–72 hours.

Oral Hygiene:

- Avoid brushing the surgical site for several days.
- Use any prescribed antimicrobial rinse as directed.
- Brush remaining teeth normally.

Diet:

- Soft foods for the first few days.
- Avoid chewing on the affected side until cleared by your dentist.

Activity:

- Limit strenuous activity for 48 hours.

Follow-Up:

- Stitches may be removed after about 1 week.
- Contact the office if pain worsens, swelling increases after day 3, or you notice signs of infection.
