

Free Gingival Graft

Purpose: Surgical procedure where a piece of gum tissue is taken from one area (usually the palate) and placed on another area to increase gum thickness or cover exposed roots.

First 24–48 Hours:

- Mild bleeding, swelling, and discomfort are common.
- Apply ice packs to the outside of the face for 15–20 minutes at a time during the first day.
- Keep head elevated to reduce swelling.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics exactly as directed.
- Expect mild discomfort at both the donor and recipient sites.

Oral Hygiene:

- Avoid brushing or flossing near the graft site until advised.
- Use prescribed antimicrobial rinses to keep the area clean.

Diet:

- Eat soft foods for at least 1 week.
- Avoid hot, spicy, crunchy, or hard foods that may irritate the graft.

Special Precautions:

- Avoid pulling on the lip or cheek to look at the graft.
- Do not smoke or drink alcohol during healing.

Follow-Up:

- Attend scheduled follow-up visits to monitor graft healing.
- Contact your dentist if bleeding persists, swelling worsens after 3 days, or signs of infection occur.
