

Oral Cancer Screening Follow-Up

Purpose: Monitoring and follow-up after an oral cancer screening, particularly if an abnormal finding was noted.

First 24 Hours:

- No special restrictions unless a biopsy was performed (follow biopsy instructions if applicable).
- You may resume normal activities immediately.

Pain & Sensitivity:

- Typically, no discomfort occurs after a standard screening.
- If tissue sampling or scraping was done, mild soreness may occur.

Oral Hygiene:

- Continue normal brushing and flossing.
- Avoid irritating any areas of the mouth that feel sensitive.

Diet:

- No restrictions unless otherwise advised.

Special Precautions:

- Monitor any areas identified by your dentist for changes in size, color, or sensation.
- Avoid tobacco and limit alcohol, as they increase cancer risk.

Follow-Up:

- Follow the recommended re-examination schedule (often every 6–12 months).
- Contact the office immediately if you notice lumps, persistent sores, white or red patches, or unexplained oral pain.
