

Root Amputation

Purpose: Surgical removal of one root of a multi-rooted tooth while preserving the remaining tooth structure, often to treat localized infection or damage.

First 24–48 Hours:

- Mild bleeding, swelling, and discomfort are expected.
- Apply ice packs to the outside of the cheek for 15–20 minutes at a time during the first day.
- Keep head elevated while resting.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics exactly as directed.
- Mild sensitivity in the treated tooth is normal for several days.

Oral Hygiene:

- Avoid brushing directly over the surgical site for the first few days.
- Begin gentle warm salt water rinses 24 hours after surgery.

Diet:

- Soft foods for the first 48 hours.
- Avoid chewing on the treated side until your dentist advises otherwise.

Special Precautions:

- Avoid smoking and alcohol during healing.
- Do not disturb the surgical site with your tongue or fingers.

Follow-Up:

- Attend follow-up visits to monitor healing and tooth stability.
- Contact your dentist if bleeding persists, swelling worsens after 3 days, or signs of infection occur.
