

Full Mouth Rehabilitation (Multiple Restorations)

Purpose: Comprehensive treatment involving multiple crowns, bridges, implants, or other restorations to restore function, aesthetics, and oral health.

First 24–48 Hours:

- Mild soreness in teeth, gums, and jaw is normal.
- Avoid chewing hard foods until bite is fully adjusted.
- Some temperature sensitivity may occur temporarily.

Pain & Sensitivity:

- Take OTC pain relievers as needed.
- Sensitivity toothpaste can help with cold or heat sensitivity.

Oral Hygiene:

- Brush twice daily with a soft-bristled toothbrush.
- Floss daily, using floss threaders or interdental brushes where needed.
- Avoid overly abrasive toothpaste to protect new restorations.

Diet:

- Soft diet for the first 24–48 hours, gradually resuming normal foods.
- Avoid sticky, hard, or overly chewy foods that could damage restorations.

Special Precautions:

- If temporary restorations are present, avoid biting into hard foods until permanent ones are placed.
- Report any bite discomfort to your dentist for adjustment.

Follow-Up:

- Attend all scheduled follow-up appointments to ensure proper fit and function.
- Contact the office if restorations feel loose, crack, or cause persistent discomfort.
