

Multiple Extractions

Purpose: Removal of several teeth in one visit.

First 24 Hours:

- Follow clot protection steps as with single extractions.
- Expect more swelling and soreness than with one extraction.
- Keep head elevated when resting.

Pain & Swelling:

- Take prescribed pain medication as directed.
- Apply ice packs for 20 minutes on/off during the first 24 hours.
- Swelling may last longer than single extraction cases.

Bleeding:

- Slight bleeding or oozing is normal for the first day.
- Replace gauze and bite with firm pressure for 30 minutes if needed.

Oral Hygiene:

- Avoid rinsing for the first 24 hours.
- After 24 hours, gently rinse with warm salt water 3–4 times daily.
- Brush remaining teeth carefully.

Diet:

- Very soft diet for the first 2–3 days.
- Avoid crunchy, hard, or spicy foods until comfortable.

Special Precautions:

- If dentures were placed immediately, do not remove them until instructed by your dentist.

Follow-Up:

- A post-op check may be advised within 24–48 hours to monitor healing.
- Call if swelling increases after day 3, pain worsens, or heavy bleeding continues.
