

Orthodontic Adjustment

Purpose: Routine tightening or activation of braces to continue tooth movement.

First 24 Hours:

- Mild soreness or pressure on teeth is common.
- Avoid very hard or sticky foods during this time.

Pain & Sensitivity:

- Use OTC pain relievers as needed for discomfort.
- Warm salt water rinses can soothe irritated gums or cheeks.

Oral Hygiene:

- Brush thoroughly after every meal using an orthodontic toothbrush.
- Floss with a floss threader or use interdental brushes.

Diet:

- Avoid hard, sticky, or chewy foods that can damage braces.
- Stick to softer foods if teeth are sore.

Special Precautions:

- Use orthodontic wax to cover any brackets or wires causing irritation.
- Contact the office if a wire or bracket breaks or becomes loose.

Follow-Up:

- Adjustments are typically needed every 4–8 weeks.
- Good home care is essential to prevent decalcification and cavities.
