

Osseous Surgery

Purpose: Surgical procedure to reshape or remove diseased bone around teeth to reduce periodontal pockets and improve gum health.

First 24–48 Hours:

- Mild bleeding, swelling, and discomfort are normal.
- Apply ice packs to the outside of the face for 15–20 minutes at a time during the first day.
- Keep head elevated to minimize swelling.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics exactly as directed.
- Mild tooth sensitivity, especially to temperature, may occur for several weeks.

Oral Hygiene:

- Avoid brushing directly over the surgical site for the first week.
- Use prescribed antimicrobial rinses to keep the mouth clean.

Diet:

- Soft foods for the first 3–5 days.
- Avoid spicy, acidic, hard, or crunchy foods.

Special Precautions:

- Avoid strenuous activities for 48 hours.
- Do not smoke or drink alcohol during healing.

Follow-Up:

- Attend scheduled follow-up visits for suture removal and healing checks.
- Contact your dentist if bleeding persists, swelling worsens after 3 days, or signs of infection occur.
