

Tooth Whitening (In-Office and Take-Home)

Purpose: Cosmetic procedure to lighten and brighten teeth using bleaching agents.

First 24 Hours:

- Avoid consuming staining foods or drinks (coffee, tea, red wine, berries, dark sauces).
- Do not smoke or use tobacco products.

Sensitivity:

- Temporary tooth sensitivity is common, especially to cold.
- Use sensitivity toothpaste if needed.
- Avoid very hot or cold foods for 1–2 days.

Oral Hygiene:

- Brush and floss gently using a soft-bristled toothbrush.
- Continue using desensitizing toothpaste for a few days if needed.

Diet:

- Stick to "white" or light-colored foods for the first 24–48 hours.
- Avoid acidic foods that may increase sensitivity.

Special Precautions:

- Follow provided instructions for take-home kits carefully.
- Do not overuse whitening products, as this can cause enamel damage.

Follow-Up:

- Sensitivity should resolve within a few days.
- Touch-up treatments may be recommended periodically to maintain results.
