

Vestibuloplasty

Purpose: A surgical procedure to deepen the oral vestibule (space between the gums and lips/cheeks) to improve denture retention or oral function.

First 24–48 Hours:

- Mild bleeding, swelling, and discomfort are expected.
- Apply ice packs to the outside of the face for 15–20 minutes at a time during the first day.
- Keep your head elevated while resting.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics exactly as directed.
- Mild tenderness and swelling may persist for several days.

Oral Hygiene:

- Avoid brushing directly over the surgical area for the first week.
- Use prescribed antimicrobial rinses to keep the mouth clean.

Diet:

- Eat soft foods for at least 1 week.
- Avoid hot, spicy, crunchy, or acidic foods.

Special Precautions:

- Avoid pulling on the lips or cheeks to view the area.
- Do not smoke or drink alcohol during healing.

Follow-Up:

- Attend follow-up visits for healing assessment and suture removal.
- Contact your dentist if bleeding continues, swelling worsens after 3 days, or signs of infection develop.
