

Dental Bonding

Purpose: Application of tooth-colored composite resin to repair chips, cracks, discoloration, or gaps.

First 24 Hours:

- Avoid chewing until numbness wears off.
- Composite resin is fully set when you leave the office, but be gentle for the rest of the day.

Pain & Sensitivity:

- Mild sensitivity to temperature may occur for a few days.
- Use OTC pain relievers if needed.

Oral Hygiene:

- Brush and floss normally.
- Avoid abrasive toothpaste that may scratch the resin.

Diet:

- Avoid very hard or sticky foods for the first 24 hours.
- Limit staining foods and drinks to prevent discoloration.

Special Precautions:

- Do not use teeth as tools to open packages or bite hard objects.
- Bonding material can chip—avoid nail-biting or chewing on pens.

Follow-Up:

- Bonding may last several years but can stain or wear over time.
- Contact the office if you notice chips, cracks, or roughness.
