

Periodontal Regenerative Surgery

Purpose: Surgical procedure to restore lost bone and tissue around teeth using grafts, membranes, or biologic agents.

First 24–48 Hours:

- Mild bleeding, swelling, and discomfort are normal.
- Apply ice packs to the outside of the face for 15–20 minutes at a time during the first day.
- Keep head elevated to reduce swelling.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics as directed.
- Mild tooth sensitivity to temperature and pressure may last for several weeks.

Oral Hygiene:

- Avoid brushing directly over the surgical site until instructed.
- Use prescribed antimicrobial mouth rinses to maintain cleanliness.

Diet:

- Stick to soft foods for 3–5 days.
- Avoid hard, crunchy, or sticky foods that can disturb the healing area.

Special Precautions:

- Avoid strenuous activities for the first 48 hours.
- Do not smoke or drink alcohol during healing.

Follow-Up:

- Attend scheduled follow-up visits to monitor tissue and bone regeneration.
- Contact your dentist if bleeding persists, swelling worsens after 3 days, or signs of infection occur.
