

Sinus Lift / Sinus Augmentation

Purpose: Surgical procedure to increase bone height in the upper jaw by lifting the sinus membrane and placing bone graft material, typically for future implant placement.

First 24 Hours:

- Mild swelling, bleeding, and nasal stuffiness are normal.
- Avoid blowing your nose for at least 7–10 days to prevent pressure on the surgical site.
- Apply an ice pack externally in 15-minute intervals to reduce swelling.

Pain & Sensitivity:

- Use prescribed or OTC pain relievers as directed.
- Some sinus pressure or mild headache is normal.

Oral Hygiene:

- Brush teeth carefully, avoiding the surgical site.
- Rinse gently with warm salt water starting 24 hours after surgery.

Diet:

- Eat soft foods for at least the first week.
- Avoid very hot, spicy, or crunchy foods that could irritate the area.

Special Precautions:

- Avoid using straws, smoking, or any activity that creates suction in the mouth.
- If you sneeze, do so with your mouth open to reduce sinus pressure.
- Take prescribed antibiotics and decongestants as directed.

Follow-Up:

- Sutures may dissolve on their own or require removal.
- Contact the office if you experience excessive bleeding, persistent nasal discharge, severe pain, or swelling that worsens after 3 days.
