

Surgical Removal of Supernumerary Teeth

Purpose: Surgical extraction of extra teeth (supernumerary teeth) that can cause crowding, delayed eruption, or other dental problems.

First 24 Hours:

- Mild swelling and bleeding are normal.
- Apply ice packs to the outside of the face for 15–20 minutes at a time to reduce swelling.
- Keep the head elevated when resting.
- Avoid spitting, rinsing, or using straws for the first 24 hours.

Pain & Sensitivity:

- Take prescribed or OTC pain relievers as directed.
- Some soreness in the gums and jaw is expected.

Oral Hygiene:

- Brush teeth gently, avoiding the surgical site.
- Begin warm salt water rinses after 24 hours, several times daily.

Diet:

- Soft foods are recommended for the first few days.
- Avoid hard, crunchy, or sticky foods that may disrupt healing.

Special Precautions:

- Do not smoke or consume alcohol while healing.
- Avoid touching the extraction site with fingers or tongue.
- Stitches may be placed and will either dissolve or require removal.

Follow-Up:

- Attend scheduled post-op appointments to monitor healing.
- Contact the office if bleeding persists, swelling worsens after 3 days, or signs of infection develop.
