

TMJ Surgery

Purpose: Surgical treatment for temporomandibular joint disorders to improve jaw function, reduce pain, and correct structural problems.

First 24–48 Hours:

- Swelling, stiffness, and discomfort are normal.
- Apply ice packs to the side of the face for 15–20 minutes at a time during the first day.
- Keep head elevated to reduce swelling.

Pain & Sensitivity:

- Take prescribed pain medications and anti-inflammatory drugs as directed.
- Mild ear pain or clicking sounds may occur temporarily.

Oral Hygiene:

- Brush gently, avoiding excessive jaw movement.
- Use antimicrobial rinses if prescribed.

Diet:

- Soft or liquid diet for the first week to avoid stress on the joint.
- Avoid chewy, hard, or crunchy foods.

Special Precautions:

- Avoid wide mouth opening, yawning, or chewing gum during recovery.
- Perform gentle jaw exercises only if instructed by your surgeon.
- Do not smoke or drink alcohol.

Follow-Up:

- Attend scheduled visits to monitor joint healing and function.
- Contact your surgeon if you experience worsening pain, inability to open or close your mouth, or signs of infection.
