

Vestibuloplasty

Purpose: Surgical procedure to deepen the oral vestibule (space between the lips/cheeks and gums) to improve denture stability or oral function.

First 24–72 Hours:

- Swelling, mild bleeding, and discomfort are common.
- Apply ice packs to the outside of the mouth for 15–20 minutes at a time during the first 24 hours.
- Keep head elevated to reduce swelling.

Pain & Sensitivity:

- Take prescribed pain medications and antibiotics exactly as directed.
- Mild tightness or stretching sensation in the lips/cheeks is normal.

Oral Hygiene:

- Avoid brushing near the surgical site until cleared by your dentist.
- Rinse gently with antimicrobial mouthwash or warm salt water starting 24 hours after surgery.

Diet:

- Soft or liquid diet for the first few days.
- Avoid hot, spicy, and crunchy foods until fully healed.

Special Precautions:

- Do not pull on the lips or cheeks to look at the surgical site.
- Avoid smoking and alcohol, as they slow healing.
- Refrain from strenuous activity until cleared.

Follow-Up:

- Attend scheduled appointments to monitor healing.
- Contact your dentist if bleeding persists, swelling increases after 3 days, or signs of infection occur.
