

Vestibuloplasty

Purpose: Surgical procedure to deepen the oral vestibule (space between lips/cheeks and gums) to improve denture retention, oral function, or access for oral hygiene.

First 24–48 Hours:

- Swelling, mild bleeding, and discomfort are expected.
- Apply ice packs externally for 15–20 minutes at a time during the first day.
- Keep the head elevated while resting.

Pain & Sensitivity:

- Take prescribed or OTC pain relievers as directed.
- Mild difficulty speaking or eating is common during initial healing.

Oral Hygiene:

- Avoid brushing the surgical site until cleared by your dentist or surgeon.
- Rinse gently with an antimicrobial mouthwash or warm salt water starting 24 hours after surgery.

Diet:

- Stick to a soft, cool diet for the first few days.
- Avoid hot, spicy, or acidic foods that could irritate the area.

Special Precautions:

- Do not pull on the lips or cheeks to inspect the surgical site.
- If a stent or denture is placed to maintain vestibular depth, wear it as instructed and clean it carefully.
- Avoid strenuous activity for at least 48 hours.

Follow-Up:

- Attend follow-up visits to monitor healing and vestibular depth.
- Contact the office if there is persistent bleeding, swelling after 3 days, or signs of infection.
