

Wisdom Tooth Removal

Purpose: Removal of impacted or partially erupted third molars.

First 24 Hours:

- Same bleeding and clot care as other extractions.
- Expect facial swelling, jaw stiffness, and possible bruising.

Pain & Swelling:

- Take prescribed pain medication as directed.
- Apply ice packs to the outside of your face for 20 minutes on/off for the first 24 hours.
- Switch to warm compresses after 48 hours to help with stiffness.
- Gentle jaw stretching after 3 days can help prevent limited opening.

Diet:

- Liquid and soft foods for 3–5 days.
- Avoid straws for 1 week to prevent dislodging the clot.

Activity:

- Rest for 2–3 days after surgery.
- Avoid sports or activities that may cause trauma to the face.

Special Precautions:

- If upper wisdom teeth were removed near the sinuses, avoid blowing your nose for 1 week.
- Sneeze with your mouth open to avoid pressure in the sinus.

Follow-Up:

- Suture removal if required.
- Contact the office if you experience persistent numbness, fever, foul taste, or swelling that worsens after 3 days.
